

Press Release

Swan Island Networks and Trusted Mobile Solutions, Inc. (tMo) Announce Strategic Alliance to Extend TIES Information Sharing Capability to Wireless Mobile

Portland, OR —October, 2007— Swan Island Networks, Inc., a recognized leader in crisis management services with everyday operational value, and Trusted Mobile Solutions™ Inc. (tMo), the provider of industry-leading products and services enabling highly secure information sharing for the wireless mobile market, today announced a strategic alliance crafted to extend the common operational picture capabilities of Swan Island's TIES® managed service to wireless mobile devices.

TIES is a Internet service that aggregates thousands of disparate data sources—open, proprietary and sensitive—in order to provide a personally relevant, up-to-the-minute “command center” picture. Each TIES subscriber receives this information on Enterprise 2.0-style dashboards, gadgets and maps. TIES subscribers can also join in with other credentialed professionals in one of many TIES Communities of Trust—a kind of social network platform for those with professional responsibility for protecting people, property and information.

tMo's solutions are based on the powerful back-end technology developed by Swan Island Networks, Inc., and enhanced with leading edge technology from vendors including Microsoft Corp. and Cisco, Inc., for mobile devices, wireless networks and integrated web tiers. This includes security role-based filters, device type security, transport level security based on open standards, audit trails, and geospatially based watermarking for messages sent from mobile devices. tMo's rendering capabilities include installed client applications for Windows-OS mobile devices and mobile browsers using WPF, such as iPhones, Blackberrys and Web phones. tMo's offerings will be provided as smart, thin client applications for mobile devices and as a hosted managed service, or as a suite of software products and services for customers' internal networks.

“tMo leverages Swan Island Networks' TIES' strengths, including user authentication and authorization, data aggregation, and targeting,” said Charles Jennings, CEO of Swan Island Networks. “And, it will extend TIES by providing end-to-end security and assurance that's far beyond anything seen in the mobile market to date. This is particularly important for anyone who has to make critical decisions in the field. It's a way to get them the critical information they need, where and when they need it.”

“TIES is an extremely effective technology solution for Internet and IT infrastructures,” said John Ballantine, CEO of tMo. “tMo adds a key new element to this solution—the ability of information, in a highly secure form, to be communicated to mobile devices. Using TIES, tMo can deliver sensitive intelligence, security, and business continuity information, plus targeted alerts and notifications, with new methods for high-assurance mobile information sharing. Mobile users can transmit sensitive information from the field, with watermarking and other security features, so it is truly assured two-way communication.”

About Trusted Mobile Solutions, Inc. (tMo)

Trusted Mobile Solutions, Inc. (tMo™) is a privately held corporation formed to provide industry-leading technologies that address secure information sharing and brings powerful yet very simple to use multimedia and analytical tools to mobile devices. Our technology and IP offerings include core IT Enterprise components for the integration and utilization of organizations' IT Enterprise infrastructure. Our passion centers on building frameworks that make the mobile device more and more relevant for critical business and other applications and leverages organizations' investments in Enterprise technologies in order to extend traditional computing to the mobile device.

tMo is developing a series of products that combine and leverage powerful and useful tools in a manner that are unique to the market. We have created innovative IP and offerings that leverage mobile technologies and capabilities, secure information sharing, location based services and geospatial analytics, trusted on-line communities, multimedia alert creation and notification, information filtering and fusion and predictive analytics for Business Resiliency in a manner that is pioneering how businesses and individuals use their mobile devices and communicate with Enterprise environments.

About Swan Island Networks:

Swan Island Networks, Inc., founded in 2002, is a recognized leader in the development of Internet systems that provide everyday operational value—while also helping to prevent and help mitigate emergencies and other forms of business disruption. The company's TIES system has been used in military and government events, exercises and demonstrations—and is being used by public and private enterprises (including Fortune 50 global leaders) from Hawaii to Sweden.

TIES aggregates thousands of disparate data sources in order to provide a personally relevant, up-to-the-minute "command center" picture for each individual subscriber—using Enterprise 2.0-style dashboards, gadgets and maps. TIES subscribers can also join in with other credentialed professionals in one of many TIES' Communities of Trust—a kind of social networking platform for those with professional responsibility for protecting people, property and information.
