

Press Release

Trusted Mobile Solutions, Inc. (tMo™) Announces a mobile situational awareness and risk assessment solution for Windows Mobile devices – TIES® Mobile

Portland, OR – February, 2008—Trusted Mobile Solutions, Inc (tMo™), a recognized leader in the design and deployment of information exchange solutions, trusted mobile technologies and spatial decision support infrastructures based on Geographic Information Systems, today announced the delivery of TIES Mobile for its partner, Swan Island Networks.

Swan Island Networks, Inc., founded in 2002, is a recognized leader in the development of Internet systems that provide everyday operational value—while also helping to prevent and help mitigate emergencies and other forms of business disruption. The company’s TIES system has been used in military and government events, exercises and demonstrations—and is being used by public and private enterprises (including Fortune 50 global leaders) from Hawaii to Sweden. TIES aggregates thousands of disparate data sources in order to provide a personally relevant, up-to-the-minute “command center” picture for each individual subscriber—using Enterprise 2.0-style dashboards, gadgets and maps – and now with the introduction of TIES Mobile – a Windows Mobile based device. “TIES Mobile will revolutionize situational awareness and risk management by extending it to the mobile platform. This opens up many new possibilities for decision support personnel worldwide.” , says Bart Killpack, President of tMo.

As a part of the TIES system, TIES Mobile provides real time situational awareness for TIES users wherever they are. In conjunction with the ability to view and search for incoming alerts from the TIES system on a mobile device, TIES Mobile also provides the ability to originate (or create) alerts in real time into the TIES system and associated trusted community. This provides a unique event data capture capability not found in the current marketplace and a differentiating capability found only with TIES Mobile. Alerts captured on a mobile device can include text, pictures (images) and location. TIES Mobile incorporates the best of what current mapping technologies provide in using Microsoft’s Virtual Earth mapping platform for a real time mobile common operating picture. In addition, TIES Mobile is capable of using internal or external GPS units tied to a mobile device, which is especially relevant in the viewing of alerts near the device’s current location – or maintaining positional accuracy when capturing real time events.

About Trusted Mobile Solutions, Inc. (tMo)

Trusted Mobile Solutions, Inc. (tMo™) is a privately held corporation formed to provide industry-leading technologies that address secure information sharing and brings powerful yet very simple to use multimedia and analytical tools to mobile devices. Our technology and IP offerings include core IT Enterprise components for the integration and utilization of organizations’ IT Enterprise infrastructure. Our passion centers on building frameworks that make the mobile device more and more relevant for

critical business and other applications and leverages organizations' investments in Enterprise technologies in order to extend traditional computing to the mobile device.

tMo is developing a series of products that combine and leverage powerful and useful tools in a manner that are unique to the market. We have created innovative IP and offerings that leverage mobile technologies and capabilities, secure information sharing, location based services and geospatial analytics, trusted on-line communities, multimedia alert creation and notification, information filtering and fusion and predictive analytics for Business Resiliency in a manner that is pioneering how businesses and individuals use their mobile devices and communicate with Enterprise environments.
